1. Use the definition of the derivative to find a slope-measuring rule for the function $y = \sqrt{9 - 4x}$. [5 points]

2.

Suppose that $f(x) = \begin{cases} x^2 - 1, & x \leq 1 \\ k(x - 1), & x > 1. \end{cases}$

For what values of k is f

- (a) continuous? (b) differentiable? [5 points]
-

$$\textcircled{1} \quad f(x) = \sqrt{9 - 4x}$$

$$\begin{aligned} \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h} &= \lim_{h \rightarrow 0} \frac{\sqrt{9 - 4(x+h)} - \sqrt{9 - 4x}}{h} \\ &= \lim_{h \rightarrow 0} \frac{(\sqrt{9 - 4(x+h)} - \sqrt{9 - 4x})(\sqrt{9 - 4(x+h)} + \sqrt{9 - 4x})}{h} \\ &= \lim_{h \rightarrow 0} \frac{(9 - 4x - 4h) - (9 - 4x)}{h [\sqrt{9 - 4(x+h)} + \sqrt{9 - 4x}]} = \\ &= \lim_{h \rightarrow 0} \frac{-4h}{h(\sqrt{9 - 4(x+h)} + \sqrt{9 - 4x})} = \frac{-4}{2\sqrt{9 - 4x}} = \frac{-2}{\sqrt{9 - 4x}}. \end{aligned}$$

\textcircled{2}

$$\text{a) } \lim_{x \rightarrow 1^+} f(x) = \lim_{x \rightarrow 1^+} k(x-1) = 0 = \lim_{x \rightarrow 1^-} f(x) = \lim_{x \rightarrow 1^-} x^2 - 1 = 0$$

$$= f(1) = 0 \quad \text{Cont. for all } k.$$

b)

$$f'(x) = \begin{cases} 2x & x < 1 \\ k (\text{slope}) & x > 1 \end{cases} \quad f'(x) = \lim_{h \rightarrow 0} \frac{(x+h)^2 - 1 - (x^2 - 1)}{h}$$

$$= \lim_{h \rightarrow 0} \frac{x^2 + 2xh + h^2 - x^2}{h} = 2x.$$

$$\text{near } x=1: \quad 2x \Big|_{x=1} = k \Big|_{x=1} \Rightarrow 2 \cdot 1 = k$$

$\boxed{k=2} \rightarrow \text{makes it differentiable.}$
